Quicklisten:

We talk about ideal data formatting to use. The birth of the "JOML" inside joke.

News

Starts at **4m28s**.

- Shitshow recording date/time: December 7, 2016 2100EST
 - See the events page for more info!
- Lenovo finally makes Yoga 900 series Linux-compatible.
- Not only do Samsung phones explode/catch on fire, their washing machines do also!
- There's a PoC for bypassing 2FA on OWA/Office365.
- The new Macbook Pro only has 16GB of RAM because of "battery life".
- Ubuntu livepatched a fix for Dirty Cow.
- GitHub had a leak of private repositories. Oops.

Notes

Starts at **20m10s**.

Jthan was drinking Stranahan's Whiskey. Paden was drinking Glenfiddich 12. I was drinking water.

- WAR OF THE DATA: XML? JSON? YAML?
 - The tweet I reference is here.
 - I mention at some point the standalone JSON parser/formatter/pretty-printer, jshon.
 - Key takeaways:
 - Use YAML if you like whitespace (and whitespace-defined) data
 - Use XML if you like more robust data structures/more flexibility
 - Use JSON if you want something easily parsed PURELY by machines- no human eyes will need to look at it

Sysbadadministration Award

In this segment, we highlight system administration mistakes. Think of them as the IT equivalent of the Darwin Awards. **(57m00s)**

Poor Level3 suffered a massive DDoS – oh, wait- no, they didn't. They misconfigured their BGP. Nice one.

Errata

- None!
