Quicklisten:

We basically just publish our segment from Radio Statler at HOPE, a talk on "HackOps".

- News
- Notes
- Sysbadadministration Award
- Errata
- Music

News

- Verizon is under investigation by the FCC.
 - Verizon may go unpunished.
- Ar3s, the Andromeda botnet operator, has been released with minimal penal measurements.
- A judge extended a ban on 3D-printed gun plans.
- Unlike the Equifax mess and them trying to cover up their lack of patching, there actually IS a valid Apache Struts vulnerability (CVE-2018-11776, PoC).
- The Android Fortnite app installer is susceptible to hijacking.
- Blackhat attendees' tag information was available publicly.
- Google confirms that it tracks users, even with location disabled (like we mentioned in the news segment for S3E12).

Notes

Starts at **21m32s**.

I was drinking water and açai juice. Paden was drinking Diet Dr. Pepper. Jthan was drinking Booker's Bourbon Blue Knights Batch.

- Recordings from HOPE!
 - HackOps is taking the "hacker's approach" towards Operations.
 - I mention the Jargon File. Specifically, the definition of hack as we use it above.
 - Core tenets of HackOps:
 - "Sometimes the/a working solution is an OK solution."
 - "Sometimes priority precedes prettiness."
 - Upon showing a written-out plan for the implementation, they should react with "...well, **that's** stupid."

Sysbadadministration Award

In this segment, we highlight system administration mistakes. Think of them as the IT equivalent of the Darwin Awards. (**1h14m27s**)

Abbyy, an OCR software developer, has leaked docs through their exposed MongoDB instance.

Errata

- Paden, no, firearms are 100% still subject to NFA requirements (even if you make them yourself, or they “don’t have a serial number”).
- “MalwareReports”/“MalwareBlog” is actually MalwareTechBlog.
