Quicklisten:

In this episode we talk about how useful LDAP is.

Also, check out our upcoming gamenights! At least one of them is actually for a good cause!

- Just the Tip
- Notes
- 15 Clams
- Errata
- Music

Just the Tip

- Paden talks about tracepath.
- Trafshow is basically an ncurses wireshark but not as good as something like termshark.
 - Plus, trafshow upstream seems to be dead lol.

Notes

Starts at **15m46s**.

I was drinking water. Paden was drinking cranberry juice and Buckeye vodka and water. Jthan was drinking Miller High Life Light.

- Announcements!
 - We have a **two-day** game night ("night") coming up! The day before and the day of for Halloween. We'll be playing They Hunger and Afraid of Monsters (both co-op), see the link for details.
 - On November 7, I (r00t^2) will be doing Extra-Life! We'll be playing Unreal Gold Co-op plus maybe Doom if we finish Unreal.
 - By the way, Jthan, don't you fret. Unreal has enemies that look a lot like 'tacodemons'.
- LDAP (**22m48s**)
 - Four main LDAP server software (Oracle's Internet Directory, Windows' Active Directory incorporates an LDAP server, OpenLDAP (my personal preferred implementation), and RedHat's 389DS)
 - LDAP ("Lightweight Directory Access Protocol") has a multitude of applications for when you need stronger relational attributes than a relational database.
 - Anyone who's worked with LDAP before may doubt the "lightweight" part of its name, but believe me - it really is lightweight.
 - RFCs can be found here.
 - LDAP is **structured**, but you can add custom objects/object types.
 - It supports many layers of nesting and attributes with multiple values.
 - It supports aliased entries, which can be treated as an alias object or as a "real" object ("alias dereferencing").
 - It can be used as an authentication mechanism/store, and has an **extremely** flexible and complex ACL system that can do just about what you want it to.
 - It is highly, highly recommended that you use and become familiar with the OpenLDAP CLI utilites (e.g. ldapsearch) or something like python-ldap.

- Also know how to write, modify, etc. LDAP's LDIF. RedHat has some good information on LDIF.
- There are a lot of GUI clients ("LDAP browsers").
 - The absolute best is Apache Directory Studio.

15 Clams

In this segment, Jthan shares with you a little slice of life. The title is a reference to this video. (2m16s in)

Starts at **53m19s**.

Jthan is an academia whore for Yubico. He wonders about implementing a sort of "selection-based" 2FA/MFA.

Errata

- Traceroute does not require superuser/root access either.
- I meant that MySQL stores its uses in the "mysql.user" **table as rows**.
- Jthan needs to read up on the CFAA.
- I (r00t^2) still can't math.
